

Premium VPN service giveaway

Who is concerned for his(her) privacy knows that the best protection out there is to use a VPN(Virtual Private Network) service.

The Internet can be a veritable minefield for data theft and other attacks by hackers these days. Protecting your online privacy just isn't as easy as it used to be. To meet the increasing challenges of identity theft in the Internet age, Kopard a relatively new but strong company offers [the best VPN service](#) to help protect your computer from hackers and give you the peace of mind you need in your work, communication, and everyday web surfing. Their service offers:

- Up to 256 Bit Encryption
- Unlimited traffic
- Unrestricted speeds
- Offshore service provider
- 24x7x365 User support
- NAT Firewall
- Supports OpenVPN, L2TP, PPTP
- Allows torrents and P2P on NL servers
- Windows, Linux, MacOS, Android, iOS
- Connections from five different countries

and a lot more. Special protocols like IPsec are used to tunnel the entire Internet traffic which will be encrypted encapsulating an IP packet inside an IPsec packet. Simply said even your ISP can not see what data and with what destination you are sending or receiving over your Internet connection and therefore you can access possibly restricted websites at school or work. It's practically impossible for an attacker to access your VPN and even if your traffic is sniffed by somebody he will only see encrypted data without any sense for him. Another advantage of using a VPN is that you can access the Internet with another IP, not yours, so the visited websites can not see your real IP assuring the anonymousness.

Kopard's [VPN services](#) can be helpful—even necessary—for a variety of web users. The benefits of data protection extend to more than just those using the Internet for the most secure work and services, for whom online protection is an obvious must. Even the common web surfer can benefit, as the VPN service protects computers against spyware, viruses, and other threats, and it also allows access to sites that are restricted on available networks, such as those banned at the workplace or in a certain region. Data protection is vital in an age when identity theft is becoming more and more common, as well as more diverse in its effects. Identity thieves can take advantage of a range of unsecured data, from login passwords to bank account information, leaving victims to foot the bill for false expenses and claims. Taking advantage of Kopard's VPN services can help you make sure that never happens. Their services provide a combination of advanced online protection, high speed connections, and server flexibility that can satisfy any customer's needs.

Kopard offers customers only the best in data encryption and online protection, and for a limited time, you have the opportunity to take advantage of that protection free of charge. *Three winners will get access to Kopard's premium VPN account for 90 days, guaranteeing their computer's security and their own personal privacy at no charge for three months.*

How to Enter

To enter the giveaway sweepstakes, just follow these steps:
