Privatefirewall 7.0

With its computer security approach, behavioral based and signature-less, **Privatefirewall 7.0**, a Privacyware product is the perfect complement to any antivirus software you may running. Beeing a firewall though advanced, it can not remove malware, otherwise it would be the perfect defense solution for a Windows based system. The program monitor the whole system activity and alert user about any presumably malicious modification or anomaly detected to the applications, protected registry area, protected objects, emails, Windows services, running processes, DNS requests or outgoing TCP traffic blocking any known or unknown malware.

Privatefirewall 7.0 is able to intercepts the calls of WinAPI functions, initialization of new unknown processes, attempts to access protected file objects, and basically all "behind the scene" activity on your system, ensuring the best possible protection against all forms of malware including viruses, trojans, worms, spywares or rootkits and even Windows system exploits.

With its *Intrusion Detection and Prevention system*, the program is an effective protection against hackers attacks and their hiding techniques, therefore beeing much more than a simple firewall, offering unique capabilities focused on deviations of typical behavior, adapting and evolving along with the threats themselves.

Here are a few of its features :

- Windows 7, Vista 64 and 32 bit support
- Website/IP filtering
- Personal Firewall
- Behavioral hacker protection
- Advanced Application Security
- Zero-hour anti-virus protection
- Zero-hour malware protection
- System Anomaly Detection
- Email Anomaly Detection
- Packets inspection

Through a simple and intuitive interface, all modules can be accessed easily offering a deep analyze of your whole system objects. The user even can choose a predefined profile : home, office or remote profile, or can choose to block an IP or an URL if he wants.

In my opinion, this software is fully deserving the label of "premium software" and is highly recommended.

Keep safe !
